

It's not just about an increased risk of heart problems...

Four More URGENT Reasons To Get Your Blood Pressure Under Control

(And the Powerful, All-Natural Solution that Works Three Ways to Help Keep Your Blood Pressure Healthy)

If you have high blood pressure, your doctor probably didn't waste any time warning you about your increased risk for heart problems.

Physicians and scientists have long known that hypertension is the number one risk factor for heart problems—and increases your risk of a heart emergency by up to five times! Why does high blood pressure cause so much damage to your heart? It makes your heart work too hard, which causes it to weaken over time and can eventually fail.

But if that's the only thing your doctor told you, then you only got part of the story. While protecting your heart is a very good reason to get your blood pressure under control, there are four more reasons your doctor might not tell you about:

Reason #1:

High blood pressure wreaks havoc on your arteries

When your arteries are healthy, they are strong, flexible, and elastic. Their inner lining is as smooth as silk so your blood can flow freely—delivering optimal amounts of nutrients and oxygen to your organs and tissues.

But high blood pressure throws a real wrench in the works.

It can scar your arteries and make them less elastic. And when your arteries are stiff and inflexible, it's difficult for your blood to travel through your body. That means... your organs are deprived of the nutrients and oxygen they so desperately need.

If that's not bad enough... high blood pressure also can play a huge role in the development of atherosclerosis.

Atherosclerosis—or “hardening of the arteries”—is the ugly process of your artery walls becoming thicker and narrower. When high blood pressure damages the cells of your arteries' inner lining, fat... cholesterol... and calcium deposits collect and build up. This narrows your arteries and can even block blood flow to your heart, kidneys, brain, arms, and legs.

What's more... the constant pressure of blood moving through an artery can cause a weakened, damaged section of its wall to enlarge and form a bulge. This is most common in your aorta, your body's largest artery. If this bulge was to rupture, you could experience life-threatening internal bleeding. Saving your arteries and veins is a GREAT reason to get your blood pressure under control, but here's another...

Next page please...

Blood Pressure Too High? You Could Be Low On This One Crucial Nutrient...

Recent clinical trials show high blood pressure can be linked to low CoQ10 levels. In one study printed in *Pharmacotherapy*, more than 50% of patients with high blood pressure were able to stop taking between one and three blood pressure medicines after just four months of starting CoQ10 supplements!

In another equally impressive study on patients with cardiovascular conditions, 43% of these patients successfully stopped taking between one and three cardiovascular drugs thanks to CoQ10!

Plus, more than 1,000 published human and animal trials performed on CoQ10 show this stellar nutrient is completely safe.

Reason #2: High blood pressure can damage your brain

Blood vessels in your brain can rupture and become blocked, just like the blood vessels elsewhere in your body. But there's a difference...

When high blood pressure damages blood vessels in your brain, the consequences are much more serious. You could experience...

- ✓ **Cognitive Impairment**—Problems with thinking, speaking, reasoning, and memory can occur when high blood pressure narrows and blocks the arteries that supply blood to your brain.
- ✓ **Brain "Disaster"**—When a blood vessel in your brain is temporarily blocked due to atherosclerosis or a blood clot—both of which are caused by high blood pressure—you could have a transient ischemic attack (TIA). A TIA is a sudden, brief decrease in brain function—and it's a warning sign that a full-blown brain "disaster" may happen in the near future. Blocked, narrowed blood vessels can also trigger a brain "disaster"

when insufficient amounts of oxygen and nutrients cause your brain cells to die.

Keeping your blood pressure in the normal range can help your brain receive a steady supply of the nourishing blood it needs to work properly and survive. But there's another reason to keep your blood pressure healthy...

Reason #3: High blood pressure can trigger a kidney catastrophe

Your kidneys are sophisticated waste-processing machines. These two bean-shaped organs process an impressive 200 quarts of blood every day. They sift out about two quarts of waste products and extra water from your blood and send it to your bladder as urine.

These waste products come from the normal breakdown of active tissues, such as muscles, and from the foods you eat. If your kidneys didn't remove them, they would build up in your blood and cause all kinds of damage in your body. So it's vital for your health that your kidneys work properly.

When your blood pressure is too high, you begin to run into problems...

- The blood vessels of your kidneys narrow and thicken—and interfere with your kidneys' ability to filter fluid. As a result, dangerous levels of fluids and waste begin to accumulate in your blood—and your kidneys may stop working altogether.
- Your kidneys' glomeruli are scarred. These are the tiny clusters of blood vessels that filter fluid and waste from your blood. When they are damaged by high blood pressure, they are unable to filter effectively—and this could seriously harm kidney function.
- Decreased blood flow to the kidneys—due to blocked or narrowed blood vessels—triggers renin to be released. Renin is a powerful hormone that *increases* blood pressure—which can cause even more damage to your body.

And if all that isn't reason enough to lower your blood pressure, here's one more...

**Reason #4:
High blood pressure
can lead to eye problems
and vision loss**

Tiny, delicate blood vessels supply blood to your eyes—and they are just as susceptible to the effects of high blood pressure as the other blood vessels in your body.

High blood pressure can cause narrowing... rupturing... and bleeding in the blood vessels in your eyes—which can lead to impaired vision and even blindness.

But there's more. High blood pressure can also cause...

- ✓ **Fluid buildup under your retina (choroidopathy)**—A damaged blood vessel under your retina can rupture or leak—causing fluid to build up. This can result in distorted vision or scarring that impairs vision.
- ✓ **Nerve damage (optic neuropathy)**—When blood flow is blocked, nerve cells in your eyes can die. This may cause bleeding within your eyes or vision loss.

As you can see, high blood pressure can cause damage throughout your body—and affect your quality of life in many ways. That's why it's so important to keep it within normal range. Fortunately, you already have the three-pronged weapon you need to bring your blood pressure down—**Ultimate BP™**.

**Ultimate BP™ helps keep
your blood pressure healthy
in three powerful ways**

The most successful way to lower even the most resistant blood pressure is to attack the three most overlooked reasons it's shooting through the roof in the first place...

1. Blast calcium deposits out of your arteries for healthy blood flow!

Did you know that your cholesterol levels could be perfectly normal but you could still have blockages in your arteries driving up your blood pressure?

Calcium deposits can collect in your blood vessels and hinder blood flow—and statins are powerless against them. But there is a nutrient that can quickly help remove calcium from your blood vessels—so they can be open wide for healthy blood flow. It's called **Vitamin K2**.

Vitamin K2 acts like a shuttle bus service, moving unwanted calcium out of your arteries and delivering it to your bones—where it will do the most good.

Ultimate BP™ contains the MK-7 subtype of vitamin K2—which is the one you need for healthy blood pressure.

Bioavailable and highly active long-chain MK-7 has been shown in numerous studies to actually extract calcium from the blood and arteries. With this amazing nutrient, you can help keep your arteries clear of dangerous calcium plaque... promote healthy blood flow... keep your blood pressure healthy and under control—and strengthen your bones to boot!

2. Relax stiff, inflexible arteries for improved blood pressure!

Nitric oxide—or “NO” for short—is naturally produced in your body. Its job is to signal your blood vessels to relax. That allows your blood to pass easily through—naturally *increasing* your blood flow and *decreasing* your blood pressure.

Relaxed arteries are vital for healthy blood pressure, so **Ultimate BP™** boosts your production of nitric oxide with **Grape Seed Extract**.

In numerous studies, grape seed extract has proved itself to be a blood pressure-lowering dynamo. Study participants saw their systolic (upper number) blood pressure slashed by as much as 13 mmHg and their diastolic (lower number)

Next page please...

reduced by up to 6 mmHg. For many of these folks, their blood pressure worries are gone—because it returned to normal range!

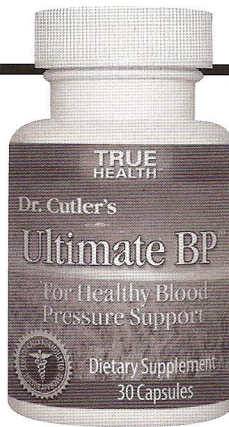

But this amazing nutrient doesn't stop there. It also has the uncanny ability to act as a natural calcium channel blocker. It helps prevent calcium from entering in the muscle cells of your heart and arteries—without the nasty side effects of prescription calcium channel blockers.

3. Kiss blood vessel constriction and water retention goodbye!

The naturally-occurring enzyme Angiotensin II is well known in the scientific world for constricting blood vessels. This action can cause damage to the lining of your blood vessels as your blood tries to squeeze through—and it can make your arteries hard and stiff.

As if that's not bad enough, Angiotensin II can also raise your sodium levels—causing you to retain water—and skyrocket your blood pressure.

Fortunately, it can be stopped with Angiotensin-Converting Enzyme (ACE) inhibitors. And what antioxidant-packed super fruit contains natural ACE inhibiting properties? None other than blueberries.

In one clinical study, blueberries inhibited ACE by a whopping 98%! They help prevent your arteries from stiffening and tightening—so you can enjoy optimal blood flow and blood pressure.

Plus, researchers have found blueberries help prevent oxidative stress... fight inflammation in your body... improve your brain function and memory recall... and promote healthy cholesterol!

That's why we've included a potent form of **Wild Blueberry Extract** in Ultimate BP™.

With these three powerful nutrients, Ultimate BP™ delivers the support you need to combat the three leading causes of blood pressure problems. So one thing is certain...

**You don't want to run out!
Reorder Ultimate BP™
today—and SAVE!**

It's easy to get your blood pressure under control—and keep it under control—with Ultimate BP™. In fact, you may already be seeing your blood pressure numbers fall to the lowest they've been in years!

SPECIAL BULLETIN

Can All-Natural Ultimate BP™ REALLY Get Your Blood Pressure Down—When Nothing Else Has Worked? These Folks Say...

"You Bet It Can!"

Since it was first introduced, Ultimate BP™ has been delivering some remarkable, even dramatic results for people who simply could not get their blood pressure down any other way.

Now you can enjoy these same benefits—and finally get your blood pressure to healthy levels again—by reordering Ultimate BP™ and taking it every day.

It Works for Me!

"I started taking Ultimate BP™ about 35 days ago, along with my current blood pressure medicine. My blood pressure readings, while only using the medicine, were always in the area of 128/86 to 140/98. At my last appointment, my doctor wanted to increase my dosage.

"After taking my first bottle of Ultimate BP™, I went to the doctor. The nursing assistant took my blood pressure, and it was 107/74.

"I was pleasantly surprised at the reading, but I didn't believe it. So I asked my doctor to check it again. This time it was 110/80! I was thrilled! Ultimate BP™ is working for me!"

—Bobby, Lithonia, GA

Saved My Life!

"I bought Ultimate BP™ a few months ago but did not start it right away. A month ago, I was hospitalized because my blood pressure had gone up to 199/89. I was prescribed the typical medications and after two weeks I was so weak I could hardly stand and decided to stop taking them. I remembered that I had purchased the Ultimate BP™ and started taking it per directions. After two more weeks, I returned to the doctor's office and found my blood pressure had dropped to 157/70. It's not perfect, but it's a great improvement. I will continue to take it from now on."

—Kathleen, Rapid City, SD

It Works!

"I had BP over 150/100. I reduced it naturally to 140/90 by exercising and taking multi vitamins.

"That took six months. I decided to try Ultimate BP™. It took two months to drop to 124/82. No more medication!"

—Rob, Orlando, FL

Decreased my Prescription Meds by Half!

"Under my doctor's supervision, I have already decreased my use of prescription medication by half and my blood pressure is fantastic. It looks like I may be able to discontinue taking meds later on."

—Larry, Trenton, GA

Staying Healthy Without Drugs!

"My husband was in pre-hypertension and his doctor wanted to start him on blood pressure meds. I have always been a firm believer that healing from within is the best solution. Within 60 days his blood pressure was down to a perfect 110/70!"

—Roberta, Scottsdale, AZ

Individual results may vary.

My Prescription Never Worked this Well!

"Give this product about three months to really start working well. First I took my prescription and Ultimate BP™ for about six weeks and this worked great. Then I weaned off the prescription and took this product only. However, I did take a potassium pill with it. My BP was running 140/95 and it's now down to about 122/73. Even with the prescription (which was giving me some terrible side effects) it was never that low, and I am a lot calmer all the time. Since off the prescription, I am feeling much better and can finally breathe again. The coughing has almost gone. Thanks for this product."

—*"Grandma the Painter," Fort Wayne, IN*

My Systolic Pressure is Down 20 Points!

"My blood pressure was about 165/92 when I began taking Ultimate BP™. After three weeks, it is now about 145/84. I plan to keep taking the product."

—*Tom, Concord, NC*

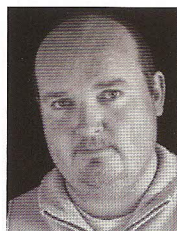

The Ultimate Blood Pressure Helper!

"I am enjoying my first bottle of Ultimate BP™ and my blood pressure is going to a more normal

reading of 140/80, sometimes even lower. I sleep better, longer and am more rested for the day. I enjoyed reading about the natural nutrients and how they help your blood pressure and cholesterol maintain safe levels."

—*Joyce, Jefferson City, MO*

Normal Blood Pressure in Two Months!

"With just one tablet per day, my blood pressure dropped from pre-hypertension levels to normal—within 60 days of use."

—*Jack, Hudsonville, MI*

Individual results may vary.

THE SCIENCE BEHIND THE MIRACLES

Studies Reveal the Blood Pressure Healing Power Inside Each Capsule of Ultimate BP™

You're already taking Ultimate BP™—because you want a safe, natural way to get your blood pressure down to healthy levels. But you might be asking yourself... “What makes Ultimate BP™ so effective at lowering my blood pressure when other remedies I've tried have failed?”

The answer is easy: Science proves it! Here's a recap of the most significant studies confirming the effectiveness of this remarkable supplement...

The more vitamin K2 in your body... the healthier your arteries!

The prestigious Rotterdam Study printed in the *Journal of Nutrition* shows patients with the highest levels of vitamin K2 experienced better cardiovascular health.

A five-year follow-up study of more than 4,400 elderly patients confirmed these findings. Vitamin K2 helps clear your arteries of dangerous calcium plaque for better blood flow and healthier blood pressure.

Blood pressure lowered by as much as 13 points!

At the Federation of American Societies for Experimental Biology 2007 conference, researchers revealed the results of a study conducted on patients with early signs of blood pressure problems. Grape seed extract reduced their systolic (upper number) blood pressure by 8.3 mmHg and their diastolic pressure (lower number) by 5.8 mmHg!

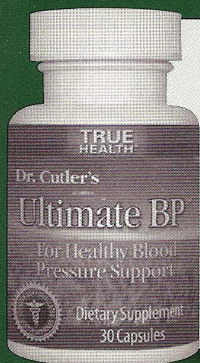

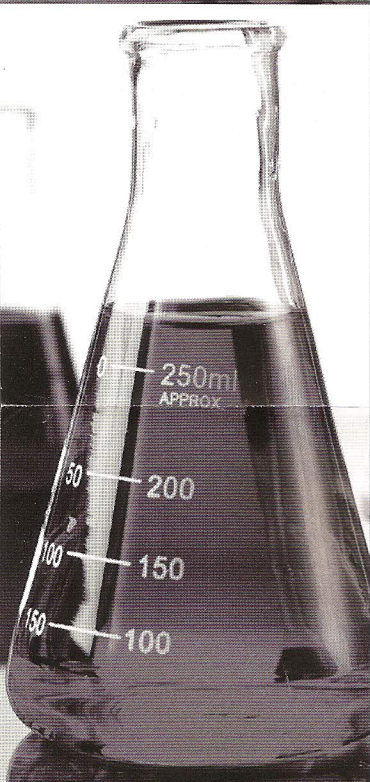

In a similar study, results were even more impressive. The patients taking grape seed extract experienced a whopping 13 mmHg drop in systolic and a 6 mmHg drop in diastolic blood pressure!

Blueberry Extract helps ease blood vessel constriction!

A study printed in the *Journal of Medicinal Food* found that highly concentrated blueberry extract inhibits ACE—an enzyme that constricts your blood vessels and makes your arteries hard and stiff—by a whopping 98%! Plus, other studies found that blueberries can improve brain function... enhance memory recall... relieve inflammation... and balance cholesterol levels.

Ultimate BP™ is your three-step program for healthy blood pressure!

Doctor-formulated and doctor-approved Ultimate BP™ contains a special formulation of vitamin K2, grape seed extract, and wild blueberry extract to help you maintain healthy blood pressure—safely and naturally.

Reorder Ultimate BP™ today and claim an additional \$50 Off with our "Best Offer Yet" reorder.

But hurry—this offer is good for the next 30 days. Remember, your reorder is protected by a 100% Unconditional Lifetime Money-Back Guarantee of Complete Satisfaction!

FREQUENTLY ASKED QUESTIONS ABOUT ULTIMATE BP™

Q: What's so great about Ultimate BP™?

A: Ultimate BP™ is a unique all-natural nutritional supplement to help men and women manage blood pressure. It contains powerful vitamin K2 as MK-7 to help remove calcium from your arteries (which can cause blockage) and redistributes the calcium to your bones for optimal bone health. Plus, this amazing formula helps maintain the elasticity of your arteries and manages healthy water retention. This three-prong approach is scientifically proven to help you keep your blood pressure in the healthy range.

Q: How do I take Ultimate BP™?

A: The recommended serving of Ultimate BP™ is one capsule daily—or as directed by your healthcare professional.

Q: Can I take Ultimate BP™ with other nutritional supplements?

A: YES! Ultimate BP™ can be taken safely with other nutritional supplements. It is also wise to check your current supplements to assess your total intake of vitamin K2 as MK-7, grape seed extract, and wild blueberry extract.

Q: How long will it take Ultimate BP™ to work for me?

A: Ultimate BP™ starts to work fast to help move calcium out of your arteries and into your bones. It helps you regulate water retention and works daily to help keep your arteries soft and flexible. While everyone is different, you should start to notice benefits within a few weeks. However, you'll likely experience best results after 60 to 90 days. Remember that it's important to support your cardiovascular system every day, so make Ultimate BP™ part of your daily health routine.

Q: What are the Ultimate BP™ capsules made of?

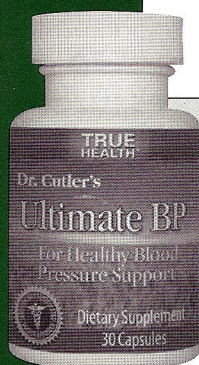

A: Ultimate BP™ uses vegetarian capsules. If preferred they can be opened up and the contents mixed with food or liquid.

Q: Are there any side effects I should know about?

A: No. Ultimate BP™ is all natural and safe—with no adverse side effects whatsoever.

Q: Where is Ultimate BP™ made?

A: Ultimate BP™ is manufactured and packaged in the United States. Our manufacturing is performed in fully licensed and FDA certified facilities to assure compliance with the latest industry guidelines, government regulations, and quality assurance practices.

Reorder Ultimate BP™ today and claim an additional \$50 Off with our "Best Offer Yet" reorder.

What to Do if You're Not Getting the Blood Pressure Results You Want With Ultimate BP™

Dear Valued Customer,

Exciting reports have been pouring in from folks across the country who are finally experiencing healthy blood pressure—thanks to Ultimate BP™.

But maybe you've been taking Ultimate BP™ for a few weeks, and you haven't seen that kind of result, yet. What are you supposed to do now?

- ✓ Give Ultimate BP™ time to work. Nutritional supplements work differently for everyone. Some people might see results from Ultimate BP™ in just a few weeks, but it can take longer for others—even up to three to six months.
- ✓ For optimal results, combine Ultimate BP™ with proper nutrition and exercise.
- ✓ Address digestive issues that can hinder nutrient absorption. If you have parasites or yeast infections, you can experience inflammation in your intestines—limiting nutrient absorption and the effectiveness of Ultimate BP™.

But the important thing is... give Ultimate BP™ a fair try of at least three to six months. If you need to reorder to have enough Ultimate BP™ on hand, now is a great time to do that.

Then if it doesn't do the job for you, simply return the unused portion of your order. True Health™ will refund 100% of your money.

So go ahead... give Ultimate BP™ a chance to work. You've got nothing to lose, and a healthy blood pressure—and a healthier life—to gain.

Sincerely,

Michael Cutler, M.D.
Medical Advisor, True Health™

P.S. Remember... with our "Best Offer Yet" reorder, you can claim an extra \$50 OFF! So reorder Ultimate BP™ today!

Exclusively for Valued TRUE HEALTH™ Customers!

Ultimate BP™

Experience Healthy Blood Pressure— And Feel Better Than You Have in Years!

Ultimate BP™ delivers all-natural, three-way support to combat the three leading causes of blood pressure problems—so you can lower your risk of...

- ✓ Heart and brain problems!
- ✓ Poor kidney function!
- ✓ Vision problems!
- ✓ Blood sugar imbalances!
- ✓ Weight gain and bloating!
- ✓ Sore, achy joints!
- ✓ Mood swings!

Try it for yourself completely RISK-FREE!

How to BOOST YOUR BENEFITS even more...

Taking supplements with overlapping benefits can help you achieve even better—and often faster—results, as well as promote healthy levels of vital nutrients that your body could be starving for. Case in point: You've been searching for solutions to normalize your blood pressure. But did you know a deficiency in Coenzyme Q10 (CoQ10) can actually *cause* high blood pressure?

You see... of all the organs in your body, your heart needs this vitamin-like "energy nutrient" the most. It's a real energy "guzzler"—requiring massive amounts of uninterrupted energy to function. When your body is low on CoQ10, your heart struggles to pump, beat, and relax as it should—weakening your cardiovascular system and stressing your arteries, blood vessels, and blood pressure.

How do you know if you're low on this essential nutrient? Well, if you're over the age of 50, chances are your body's production of CoQ10 has tanked.

In fact, startling research reveals that as many as three out of four Americans are woefully deficient in CoQ10. And this affects more than just your cardiovascular system. A CoQ10 deficiency can also leave you with a failing brain, frail immune system, low energy, and poor overall health.

The good news is... this gives you a great way to experience even better results from Ultimate BP™!

Just add Ultimate CoQ10™—the best thing you can do to promote a healthy heart and body. This powerful formula can help you...

- ✓ Turn heart problems around!
- ✓ Maintain healthy blood pressure!
- ✓ Sleep better!
- ✓ Breathe easier!
- ✓ Regulate blood sugar!
- ✓ And more!

Plus, the special form of CoQ10 in Ultimate CoQ10 Formula™ is ultra-absorbable—and gives you three-times the CoQ10 power of ordinary CoQ10 supplements!

For more information on how Ultimate BP™ and Ultimate CoQ10 Formula™ can work together to help you feel your absolute best, just ask your customer service rep about our special trial offer. You'll be glad you did!
